DETAILED ACTION

Applicant's amendment of claims 3-5, 8, 10, 13-15, 18, 21, 24, 26, 28-42 and the addition of new claim 43, in the paper of 9/27/2006, is acknowledged. Claims 1-43 are pending and at issue.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-14, 18-23, 28-33, drawn to a method of modifying a nucleic acid with a prokaryotic DNA repair ligase.

Group II, claim(s) 15-17, drawn to a method of labeling a nucleic acid with a prokaryotic DNA repair ligase.

Group III, claim(s) 24-25, drawn to method of producing a RNA molecule with a prokaryotic DNA repair ligase.

Group VI, claim(s) 26-27, 43, drawn to a method of producing a DNA molecule with a prokaryotic DNA repair ligase.

Group VII, claim(s) 34-38, drawn to a kit comprising a Mt-Lig polypeptide.

Group VIII, claim(s) 39-42, drawn to method of producing a prokaryotic DNA repair polypeptide.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or

Art Unit: 1652

corresponding special technical features for the following reasons: Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. Weller et al. (Science, Vol 297, No. 5587, pp 1686-1689, 2002) teach methods of modifying a nucleic acid comprising contacting the nucleic acid molecule with a prokaryotic DNA repair ligase polypeptide. Weller et al. also teach a kit comprising a Mt-Lig polypeptide. Thus, the shared technical feature of the groups is not a "special technical feature", unity of invention between the groups does not exist.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
